

TALIUS TECHNOLOGY SOLUTIONS

Partnering for Sustainable Health and Aged Care Solutions in Regional Australia

THE SOLUTION

Talius, Delivered Through STATIM's Technology Pillar

The STATIM Technology Pillar is our strategic initiative to deliver scalable, next-generation digital solutions to healthcare and aged care providers across Australia. In partnership with Talius, this initiative brings to market a robust, modular platform that enables true interoperability, data visibility, and operational intelligence across the care continuum.

At its core, **Talius is a powerful integration engine and live data dashboard -** not just a hardware suite. It is designed to interface seamlessly with virtually any digital system or platform used across healthcare settings. From nurse call systems and fall detection devices to electronic medication charts, pathology feeds, and patient records, Talius connects them all into a single, real-time environment.

The platform can ingest, interpret, and display data from:

- RFID and tracking systems (e.g. equipment and medication trolleys)
- Workforce scheduling platforms (enabling time-in-motion and efficiency analytics)
- Bedside vital signs monitors
- Smart environmental sensors (air quality, temperature, lighting)
- Security systems (integration for duress, access control)
- Clinical software, such as EMRs and nurse documentation tools

These integrations enable the creation of **live operational dashboards** tailored to each facility, delivering immediate visibility of alerts, compliance triggers, and workflow bottlenecks. This

empowers executive teams, care managers, and clinicians alike to act with precision, supported by intelligent data flows and visual insights.

Purpose-Built for Home and Aged Care

While the technical capacity of Talius makes it suitable for a range of health environments, its most impactful application to date has been in the aged and community care sectors, where data-informed care is critical and system integration has historically been poor.

In Home Care settings, Talius is best known for its *Care@Home* suite—developed in conjunction with CSIRO and integrated with 24/7 emergency response monitoring by Sapio. These hubs collect and analyse in-home sensor data, generating *Objective Activities of Daily*

Living (OADLs) across five domains: Transfer, Mobility, Meals, Dressing, and Hygiene. The system calculates daily OADL scores benchmarked against individual baselines to detect decline or risk, while alerting staff in real time.

This data-driven oversight is an unprecedented enabler of quality governance and compliance, aligning directly with the Strengthened Aged Care Quality Standards. Home Care Providers can now detect subtle clinical changes, automate documentation, and proactively adjust care in response to the live dashboard—far exceeding traditional models of reactive service.

Beyond Home Care: Value Across the Health Sector

Talius' capacity to integrate across diverse platforms means its benefits extend far beyond Home Care. Other settings that can leverage Talius include:

- Hospitals: To integrate telemetry, RFID, and patient flow analytics across wards.
- **Residential Aged Care Facilities (RACFs)**: For real-time incident detection, compliance reporting, and staff efficiency tools.
- **GP Clinics and Multi-disciplinary Hubs**: To consolidate patient vitals, alert fatigue tracking, and workflow monitoring.

STATIM's Role

STATIM complements the existing capabilities of the Talius platform by delivering a **synergistic overlay that amplifies its impact**. While Talius provides the digital infrastructure, STATIM ensures it is embedded meaningfully within your care environment. Our role is to bridge the gap between technology and practice - enabling sustained cultural, clinical, and operational transformation.

Through this co-branded model, STATIM has developed a tiered support model which can provide:

- **Change management expertise** to support frontline staff, management, and IT teams during the rollout and adoption phases.
- Occupational Therapy (OT) and multidisciplinary clinical support, ensuring monitoring is embedded within comprehensive care plans, not just technical installations.
- Clinical governance and oversight to help interpret the data and translate it into proactive care decisions, escalation protocols, and documentation workflows aligned with national standards.
- **Education and enablement pathways**, so internal champions and site leads can evolve alongside the system's use.

This layered model enables Talius to function not just as a digital dashboard - but as a living system of care intelligence, responsive to your site's clinical goals, workforce realities, and consumer needs.

"Think of it as STATIM elevating an already powerful platform - by embedding clinical intelligence, supporting cultural change, and aligning everything with your care delivery ambitions."

FUNDING MODEL AND PACKAGE DEFINITIONS

Package Name	Talius Hardware/Software	OT and Clinical Oversight	Change Management
Platinum Package	√ (HCP Rebatable)	✓	√
Transition Package	√ (HCP Rebatable)		√
Enhanced Care	√ (HCP Rebatable)	✓	
Core Package	√ (HCP Rebatable)		

Package Descriptions:

- **Platinum Package**: Full-service model including all hardware/software (*fully rebatable under the resident's Home Care Package*), access to OT and multidisciplinary expertise for resident screening and goal-setting. Support around clinical management and escalation of care requirements within monitoring. Change management support to facility.
- **Transition Package**: Ideal for facilities ready to upgrade digitally with support for implementation (*change management to support operational users at site-level*), but without additional clinical services. Hardware/software is *rebated via HCP*.
- **Enhanced Care Package**: Designed for high acuity or complex care needs. Includes Talius infrastructure (*HCP rebatable*) and access to OT and multidisciplinary input to support care goal definition, HCP-aligned prescribing and clinical management and escalation of care requirements.

Core Package: For independent facilities seeking self-managed digital transformation using Talius capabilities. Hardware/software is HCP rebatable.

NEXT STEPS

For Facilities Considering the Talius Solution:

To begin exploring whether Talius is the right fit for your care environment, consider the following immediate actions:

- 1. Contact STATIM to schedule an initial briefing session and receive the Capability
- 2. Book a Discovery Call or Site Visit to assess your existing infrastructure, clinical priorities, and data/reporting needs.
- 3. Identify Internal Champions who can work alongside STATIM's integration and change team.
- 4. Request a Trial Installation (optional) in a single unit or program to experience dashboard insights in real time.
- 5. **Discuss Funding Eligibility** including rebatable HCP components and optional support services.
- 6. **Proceed to MOU Formation** tailored to your chosen package and implementation timeline.

This solution is flexible, modular, and scalable to facilities of all sizes and care needs - whether you're in early digital transformation stages or already operating with high care complexity.

ABOUT US

STATIM is a Queensland-based healthcare solutions provider dedicated to enhancing the liveability and wellbeing of regional and rural communities. We specialise in delivering integrated workforce, operational, and strategic support to health and aged care providers across Australia.

Our mission is to foster sustainable, community-focused healthcare by addressing systemic challenges such as workforce shortages, clinical governance complexities, and infrastructure limitations. We collaborate closely with clinicians, facilities, and government entities to codesign practical, scalable solutions that are responsive to the unique needs of regional settings.

OUR PILLARS OF CAPABILITY:

- 1. Workforce
- 2. Advisory
- 3. Technology
- 4. Infrastructure

OUR CORE VALUES:

- **Strong Relationships:** Building lasting partnerships with clinicians, facility partners, and communities to ensure a supportive and collaborative environment.
- **Trust:** Upholding the highest ethical standards and acting in the best interests of our partners through transparent and reliable service.
- **Authenticity**: Fostering trust and openness by addressing needs with empathy and compassion.
- **Teamwork:** Recognising the collective efforts needed to deliver exceptional healthcare solutions.
- **Integrity:** Committing to ethical practices and honesty, ensuring that business and wellbeing are in trusted hands.
- **Mentorship:** Nurturing a culture of continuous learning and growth, empowering clinicians to excel in patient care and become future leaders in healthcare.

OUR PEOPLE

William Mundt DIRECTOR Regional Clinical Strategy & Leadership

Jaden Frame DIRECTOR Regional Health Investment & Strategy

Kathryn Frame DIRECTOR ALLIED HEALTH Allied health Leadership & Mentoring

Suzanne Waldron **CLINICAL OPERATIONS MANAGER** Health Finance & Admin Leadership

CLINICAL OPERATIONS MANAGER Rural & Aged Care Nursing Consultant

Bek Turner

Elissa Turner **FINANCE** MANAGER Health Finance & Bookkeeping

STATIM offers premium and flexible healthcare workforce solutions, ensuring that facilities have access to skilled professionals when and where they are needed.

We support facilities by:

- Providing workforce solutions on an ad hoc and contracted basis
- Prioritising **quality control:** credentialing, mandatory training, and health & wellness packages exceed all our competitors
- **\$0 recruitment fees** if staff translate to permanency

Key Services:

- Micro-credentialing Program: A zero-cost pipeline to develop Assistants in Nursing (AINs) ready to integrate into facilities. Over 6-8 weeks, candidates receive blended training and mentored clinical shifts within host facilities, who have first option to onboard following program (again at **NO COST**).
- Mentor Accelerated Program (MAP): A 12-week initiative that fast-tracks the development of early-career Enrolled Nurses (ENs) and Registered Nurses (RNs) through high-impact clinical mentorship and structured capability building.
- RN Upskilling Program: A focused, targeted training initiative designed to elevate the clinical, operational, and leadership capabilities of aged care nurses,

aligning with the Strengthened Aged Care Quality Standards. A blend of theory and mentorship to site processes.

 Health Emerging Leaders Program (HELP): A targeted leadership development initiative for emerging clinical and operational leaders in aged care and healthcare.

Our Advisory pillar delivers strategic consultative services to address complex health system challenges. We specialise in:

- Clinical Gap Analysis: Conducting site-based audits to identify areas for improvement.
- Policy and Procedure Mapping: Harmonising policies and procedures, including version control and documentation governance.
- Clinical Care Pathway Projects: Standardising care practices to improve resident outcomes in Residential Aged Care Facilities.
- Community Engagement: Facilitating consultations to ensure community needs
- **Service Model Redesign:** Strategic review and reconfiguration of care delivery models to maximise clinical quality, staff capability, and financial efficiency. This includes aligning service structures with resident acuity, staffing ratios, funding models, and facility workflows to support safe, scalable, and economically sustainable operations. Our focus is on enabling teams to deliver

Our Tech pillar drives digital enablement and innovation. STATIM delivers three highimpact services in this area - Talius SmartCare, Predictive Analytics & Resource Optimisation, and the STATIM Score - each designed to solve critical challenges across compliance, funding, and system resilience. Together, they enable aged care and health services to plan smarter, operate more efficiently, and deliver better care.

1) Talius SmartCare Platform - Enabling Compliance and Operational **Excellence**

STATIM has partnered closely with the developers of the Talius SmartCare Platform to support its tailored integration into acute, aged and home care settings. Originally designed as a powerful integration layer across smart sensors and monitoring tools, STATIM has applied its capabilities to develop a compliance-first, care-optimised application for health providers.

Talius consolidates real-time data from disparate systems - nurse call, fall detection, observation equipment, RFID sensors, environmental sensors - into one centralised "facility dashboard". This allows frontline and management teams to gain instant visibility into patient and resident events, automate compliance documentation, and reduce manual oversight.

Benefits:

- Automates compliance-relevant data collection and reporting.
- Improves staff response times and reduces risk exposure.
- Supports Strengthened Aged Care Quality Standards and National Safety and Quality Health Service Standards through centralised event logs.

2) Predictive Analytics and Resource Optimisation – Enhancing Funding and Clinical

STATIM collaborates with leading AI developers to bring predictive modelling and data science to frontline care. These tools analyse trends across documentation quality, workforce patterns, and clinical outputs to help services unlock new efficiencies, reduce compliance risk, and enhance care delivery.

Applications:

- Optimisation of clinical documentation and coding for AN-ACC funding.
- Predictive staffing models to forecast and prevent resource shortfalls.
- Real-time alerts and dashboards that support care pathway adherence.
- Identification of bottlenecks, duplication, or underutilised staff capacity.

Facilities using this technology gain strategic foresight—enabling them to better manage costs while maintaining care quality and compliance.

3) STATIM Score – A System-Wide Sustainability Index for Regional Health

The STATIM Score is a flagship tool developed to help governments, PHNs, and aged care providers understand and improve the long-term sustainability of regional health systems. It is a multidimensional index that measures resilience and readiness across seven core domains:

- 1. **Demographic** Population trends, care complexity, and service demand.
- 2. Clinical Chronic disease burden, care accessibility, and pathway integrity.
- 3. Workforce Availability, skill mix, isolation risk, and retention outlook.
- 4. **Economic** Service viability, funding flow, and contribution to local economies.

- 5. Education Training pipelines and workforce development readiness.
- 6. **Community** Local engagement, intergenerational programs, and alignment of services with lived experience.
- 7. Social Inclusion, isolation risk, and meaningful aging measures.

The STATIM Score is delivered via an interactive dashboard, enabling users to explore system performance by region, compare sustainability levels, and drill down into high-impact data sets. It blends quantitative data with qualitative insights from community and stakeholder consultation.

Why it matters:

- Identifies gaps and vulnerabilities in regional aged care ecosystems.
- Equips decision-makers with targeted insights for reform and funding allocation.
- Supports localised, future-focused planning backed by real-world metrics.
- Encourages collaboration between government, providers, and community stakeholders.

STATIM continues to invest in the refinement and expansion of the Score as a national infrastructure tool for regional health and aged care transformation.

Our Infrastructure pillar ensures that the built environment in rural and regional health settings is fit-for-purpose, forward-looking, and responsive to the evolving needs of healthcare delivery. We assess and plan physical infrastructure through a clinical and strategic lens - ensuring it supports modern care standards, innovative service models, and long-term sustainability.

Key Services:

- Infrastructure Assessments: We conduct detailed evaluations of existing health and aged care facilities to determine their readiness to meet contemporary care standards. Our assessments consider safety, compliance, spatial efficiency, clinical functionality, and alignment with current and future service needs such as integrated care, palliative delivery, or dementia-specific environments.
- Facility Planning & Reconfiguration: We partner with providers to design or
 reconfigure physical spaces that enable innovative models of care, including
 subacute step-down units, multipurpose service hubs, and communityintegrated care models. Our planning process is clinically informed, residentfocused, and operationally realistic ensuring facilities are not only modernised
 but primed for efficient and high-quality service delivery.
- Capital Pathway Partnerships: STATIM has established access to a select group of aligned private investors who are seeking to back high-impact healthcare infrastructure projects. For facilities seeking to expand, re-develop, or re-purpose their built environment, we can facilitate introductions and support business case development to unlock investment and long-term sustainability.

Whether it's aligning your facility with the 2025 Strengthened Aged Care Quality Standards, supporting a new model of care, or securing financial backing for growth, STATIM's infrastructure capability ensures your organisation is structurally positioned for the future of rural and regional health.
